## Self Evaluation Test -22 ( Mathematical Reasoning)

- Which of the following is different from others?  
a)  $p \rightarrow q$       b)  $\sim p \vee q$   
c)  $\sim q \rightarrow \sim p$       d)  $p \vee \sim q$ .
  - If each of the following statements  $p \rightarrow q$ ,  $p \vee \sim r$ ,  $r$  is true then  
a)  $p$  is false      b)  $q$  is false  
c)  $q$  is true      d) none of these
  - Which of the following is different from others?  
a)  $\sim(p \leftrightarrow q)$       b)  $p \leftrightarrow \sim q$   
c)  $\sim p \leftrightarrow q$       d)  $p \leftrightarrow q$
  - If both  $p$  and  $q$  are true then  $p \underline{\vee} q$  is  
a) false      b) true  
c) may be true or may be false  
d) none of these
  - Inverse of the proposition  $p \leftrightarrow q$  is equivalent to  
a)  $p \rightarrow q$       b)  $q \rightarrow p$   
c)  $p \leftrightarrow q$       d) none of these
  - Which of the following is not true?  
a)  $p \vee p = p$       b)  $p \wedge p = p$   
c)  $p \wedge t = p$       d)  $p \wedge t = t$
  - If  $a$  and  $b$  are any two elements of a Boolean lattice, then  $(a + b)' \cdot (a \cdot b)'$  is equal to  
a)  $a \cdot b$       b)  $a' \cdot b'$   
c)  $a \cdot b'$       d)  $a' \cdot b$ .
  - The remainder when  $3^{500}$  is divided by 13 is  
a) 1      b) 7  
c) 3      d) 9
  - The last (units) digit in  $11^{10^6}$  is  
a) 6      b) 3  
c) 7      d) 1
  - The remainder when  $(111)^{78}$  is  
a) 78      b) 110  
c) 1      d) none of these
  - The index of the highest power of 7 that divides  $\lfloor 350 \rfloor$  is  
a) 58      b) 50  
c) 57      d) none of these
  - The false statement in the following is  
a)  $p \wedge (\sim p)$  is a contradiction  
b)  $(p \rightarrow q) \leftrightarrow (\sim q \rightarrow \sim p)$  is contradiction  
c)  $\sim(\sim p) \leftrightarrow p$  is a tautology  
d)  $p \vee (\sim p)$  is a tautology
  - If  $p \rightarrow (\sim p \vee q)$  is false, the truth value of  $p$  and  $q$  are respectively  
a) F, T      b) F, F  
c) T, T      d) T, F
  - $\sim p \wedge q$  is logically equivalent to  
a)  $p \rightarrow q$       b)  $q \rightarrow p$   
c)  $\sim(p \rightarrow q)$       d)  $\sim(q \rightarrow p)$
  - Which of the following is the inverse of the proposition. "If a number is prime then it is odd"?  
a) If a number is not prime then it is odd.  
b) If a number is not prime then it is not odd.  
c) If a number is not odd then it is not prime?  
d) If a number is odd then it is prime.
  - Let  $P$ : "A can't excel in studies in less his father helps him";  $Q$ : "A is good in studies when his father helps him", then "A can't excel in studies if his father helps him", will be  
a)  $P \wedge Q$       b)  $Q \rightarrow P$   
c)  $P \rightarrow Q$       d)  $P \leftrightarrow Q$ .
  - If  $(p \wedge \sim r) \rightarrow (\sim p \vee q)$  is false, then the truth values of  $p$ ,  $q$  and  $r$  are respectively  
a) T, F and F      b) F, F and T  
c) F, T and T      d) T, F and T
  - If  $p$ : 4 is an even prime number,  $q$ : 6 is a divisor of 12 and  $r$ : HCF of 4 and 6 is 2 then which one of the following is true?  
a)  $p \wedge q$       b)  $(p \vee q) \wedge (\sim r)$   
c)  $p \leftrightarrow (q \wedge r)$       d)  $\sim p \vee (q \wedge r)$   
e)  $p \leftrightarrow (q \wedge r)$ .
- Each paragraph given below is followed by some multiple choice questions. Each question has one correct option. Chose the correct option.
- Paragraph 1. Consider the statement  $r : p \rightarrow (\sim p \vee q)$  where  $p$  and  $q$  are any two logical statements.
- If the truth values of  $p$  and  $q$  are respectively F and T, then what is the truth value of  $r$   
a) T      b) F  
c) T or F      d) none of these
  - If  $r$  is given to have truth value F, then the truth values of  $p$  and  $q$  are respectively  
a) T, T      b) F, F  
c) F, T      d) T, f.
  - Contrapositive of the statement  $r$  is  
a)  $(\sim p \vee q) \rightarrow p$       b)  $(p \wedge \sim q) \rightarrow (\sim p)$   
c)  $p \wedge \sim q$       d) none of these
- Consider the natural number  $n = 720$
- The number of divisors of  $n$  is  
a) 6      b) 24  
c) 30      d) none of these
  - Sum of divisors of  $n$  is  
a) 60      b) 2418  
c) 30      d) none of these
  - The number of positive integers less than  $n$  and relatively prime to  $n$  is  
a) 30      b) 2418  
c) 60      d) 192
- Each of the following questions contain two statements:  
Statement-1 (Assertion) and Statement-2 (Reason).  
Each of these questions also has four alternative choices, only one of which is correct. Select the correct choice.

## Self Evaluation Test -22 ( Mathematical Reasoning)

25. Statement-1 : “ $(p \wedge \sim q) \wedge (\sim p \wedge q)$  is a fallacy.”

Statement-2 “ $(p \rightarrow q) \longleftrightarrow (\sim q \rightarrow \sim p)$ ” is a tautology.

- a) Statement-1 is true, statement-2 is true
- b) Statement-1 is true, statement-2 is false
- c) Statement-1 is false, statement-2 is true
- d) Statement-1 is true, statement-2 is true; statement-2 is a correct explanation for statement-1.

26. Statement-1: “The number of positive integers less than 72 and relatively prime to 72 is 24”

Statement-2 : “The number of positive divisors of 72 is 12.”

- a) Statement-1 is true, statement-2 is true; statement-2 is a correct explanation for statement-1.
- b) Statement-1 is true, statement-2 is true; statement-2 is not a correct explanation for statement-1.
- c) Statement-1 is true, statement-2 is false.
- d) Statement-1 is false, statement-2 is true

27. Let  $n = p_1^{\alpha_1} p_2^{\alpha_2} p_3^{\alpha_3} \dots p_k^{\alpha_k}$  be a natural number, where  $p_1, p_2, \dots, p_k$  are distinct primes and  $\alpha_i$ s are positive integers.

Statement-1: “The number of positive divisors of n is

$$(\alpha_1 + 1)(\alpha_2 + 1)(\alpha_3 + 1) \dots (\alpha_k + 1).’$$

Statement-2: The number of ways of choosing none, one, two....or more objects from amongst  $\alpha_1$  object of one kind,  $\alpha_2$  objects of another kind,  $\alpha_3$  objects yet of another kind, .....,  $\alpha_k$  objects again of same kind, is

$$(\alpha_1 + 1)(\alpha_2 + 1) \dots (\alpha_k + 1)$$

- a) Statement-1 is true, statement-2 is true but statement-2 is not a correct explanation for statement-1.
- b) statement-1 is true, statement-2 is true; statement-2 is a correct explanation for statement-1.
- c) Statement-1 is true, statement-2 is false.
- d) Statement-1 is false, statement-2 is true.

Directions:

Each questions in this section contains statements in two columns, which have to be matched. Statements in Column I are labelled

as (A, (B), (C) and (D) whereas statements in column II are either labelled as (p), (q), (r), (s) or as (p), (q), (r), (s), (t). the answers to these questions have to be indicated by darkening of appropriate bubbles as illustrated in the following examples:

If the correct matches are A - pq, B - rs, C - s, D - pr, then the correct darkening of bubbles will look like the following:

	P	P	P	P
A	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
B	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>
C	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
D	<input checked="" type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>

If the correct matches are A-qr, B-pt, C-pst and D-p, then correct darkening of bubbles will look like the following:

	p	p	p	p
A	<input type="radio"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
B	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
C	<input checked="" type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>
D	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

28. Column I
- A  $\sim (p \wedge q)$
  - B  $q \rightarrow \sim p$
  - C  $\sim (p \leftrightarrow q)$
  - D  $\sim \{(p \rightarrow q) \wedge (q \rightarrow p)\}$
- Column II
- p)  $\sim p \leftrightarrow q$
  - q)  $p \leftrightarrow \sim q$
  - r)  $\sim p \leftrightarrow \sim q$
  - s)  $\sim p \vee \sim q$
29. Column I
- A  $(p \vee q) \vee (q \vee \sim q)$
  - B  $(p \wedge q) \wedge (p \wedge \sim p)$
  - C  $(p \rightarrow q) \wedge (q \rightarrow p)$
  - D  $(p \rightarrow q) \leftrightarrow (\sim q \rightarrow \sim p)$
- Column II
- p) is a fallacy
  - q) is a contradiction
  - r) is a tautology
  - s) is neither a fallacy nor a tautology
30. Column I
- A Number of divisors p) 60 of 420 is
  - B Number of even q) 30 divisors of 720 is
  - C Sum of divisors of 24 is r) 120
  - D Number of divisors of s) 24  $2^4 \times 3^3 \times 7^2$  is
